

Working as a System, Not Just a Laboratory

Case Review

- Routine meetings between Laboratory and Follow-up
- Consultation with subspecialist groups
- Technical assistance and collaboration with colleagues

Going Forward

In summary

- Setting and monitoring cutoffs has many challenges
 - Laboratory diversity
 - Volumes of data
 - Biological variability
 - Case definitions
- No one tool or methodology covers all the regulatory requirements, addresses good laboratory practices, or tackles all the challenges
- Multidisciplinary and collaborative approach is best to identify newborns at highest risk
