January 5, 2012

Dear Dr. Copeland,

The evidence review of Neonatal Hyperbilirubinemia is now complete. The revised final report is enclosed.

Several changes have been made to the report since the May 2011 SACHDNC meeting to reflect the comments from the Committee and to incorporate newer evidence.

Important changes in the final report include:

- Updated literature review including literature pertaining to natural history, screening, treatment, and economics
- Communication with neonatal hyperbilirubinemia experts and incorporation of provided evidence
- Revised tables throughout the document
- Revised methods, key findings, and summary sections based upon newer evidence

In addition, the entire report has been revised to improve readability.

Sincerely,

/James M. Perrin/

James M Perrin, M.D.  
Evidence Review Group Chairperson  
Professor of Pediatrics, Harvard Medical School  
Director, Division of General Pediatrics  
Associate Chair for Research, MassGeneral Hospital *for* Children
