**Adversomics Research**

- **Awardee:** Kaiser Foundation Hospitals
- **Principal Investigator:** Nicola Klein, MD, PhD
- **Project Award:** \$338,425
- **Description:** This project focuses on adversomics. It aims to identify inherited, immunologic, and clinical factors that may predict the occurrence of febrile seizures after measles vaccination.

---

---

---

---

---

---

---

### Maternal Immunization

- **Awardee:** Cincinnati Children's Hospital Medical Center
- **Principal Investigator:** Steven Black, MD
- **Project Award:** \$250,000
- **Description:** This project focuses on maternal immunization safety. It aims to validate the Global Alignment of Immunization Safety Assessment in pregnancy (GAIA) maternal and neonatal outcome definitions to standardize the evaluation of the safety of vaccines.

---

---

---

---

---

---

---

### Genetic Determinants of Immune Response After Yellow Fever Vaccination

- **Awardee:** The Rockefeller University
- **Principal Investigator:** Jean-Laurent Casanova, MD, PhD
- **Project Award:** \$161,575
- **Description:** This project focuses on precision medicine. It aims to analyze the genetic determinants of the immune response following yellow fever vaccination among individuals who experience serious adverse events.
