Introduction

On May 16 and 17, 2022, the Health Resources and Services Administration (HRSA) and telehealth.hhs.gov hosted the two-day virtual National Telehealth Conference for all stakeholders with an interest in or working in the field of telehealth. This conference was convened as an opportunity to bring together public and private sector leaders in telehealth to share best practices and lessons learned, examine the current and future landscape of telehealth and its role in health care, and provide opportunities for participants to connect and interact with federal partners. Attendees had the opportunity to hear from the Department of Health and Human Services (HHS) leadership and HRSA Administrator Carole Johnson, along with telehealth experts on a variety of topics, including:

- Achieving health equity through increased access and adoption of telehealth including the improvement of broadband connectivity,
- The role of telehealth as a tool to improve the quality of care for patients, especially those in rural and underserved communities,
- Tele-behavioral health as a model and example of the success of integrating telehealth during the pandemic and beyond,
- Sharing clinical telehealth best practices and lessons learned, and
- Identifying health policy implications for telehealth to inform the future of telehealth in an evolving health care environment.

This document provides a high-level summary of the conference by session. Information on resources as well as the full agenda can be found in Appendix A and B. All conference session recordings and slides can be accessed at https://ruralhealthlink.org/national-telehealth-conference/.
Summary of Conference Proceedings

Day 1 (May 16, 2022)

Plenary – HHS Leading the Way in Telehealth

This opening plenary session was designed as a panel discussion with a focus on the U.S. Department of Health and Human Services (HHS) leadership role in telehealth. Panelists included leaders from HHS, including:

- Moderator: Carole Johnson, Administrator, Health Resources and Services Administration
- Andrea Palm, Deputy Secretary, U.S. Department of Health and Human Services
- Rochelle P. Walensky, MD, MPH, Director, Centers for Disease Control and Prevention
- Meena Seshamani, MD, PhD, Deputy Administrator, Director for the Center for Medicare, Centers for Medicare & Medicaid Services
- Miriam Delphin-Rittmon, PhD, Assistant Secretary for Mental Health and Substance Use, Substance Abuse and Mental Health Services Administration

HHS leaders discussed priorities and highlighted key efforts across the Department to expand access to telehealth services. Each panelist described how their respective agencies are leading the way in telehealth, including efforts related to health equity, health policy, the health care workforce, support for older American and those with disabilities, and telehealth’s role in behavioral health.

Key Takeaway Points:

- HRSA’s Office for the Advancement of Telehealth (OAT) works closely with other Offices to expand telehealth services through grants and launched telehealth.hhs.gov to be a one-stop resource for telehealth information and coordination across government.
- The U.S. Department of Health and Human Services’ (HHS) increased flexibility for virtual care technology expanded services and practitioner eligibility for Medicare reimbursement led to an unprecedented number of providers quickly standing up telehealth services and connecting with patients through video conferencing, remote monitoring, and wireless communications.
- Across the Centers for Disease Control and Prevention, evidence is building to support telehealth as a modality to deliver care and research, and the agency exists to assess short- and long-term impacts on access to care, health care quality, health care utilization, health outcomes, costs, and health equity.
- The Centers for Medicare & Medicaid Services (CMS) is focused on reducing disparities, driving innovation to further high-quality whole-person care, and fiscal stewardship and sustainability of programs.
• During the COVID-19 public health emergency, the Substance Abuse and Mental Health Services Administration (SAMHSA) facilitated the use of telehealth and drew upon flexibilities and exceptions for controlled medications of the U.S. Drug Enforcement Administration (DEA).

Plenary - Telehealth’s Role in Behavioral Health Access and Outcomes

This session focused on discussing the vital role that telehealth plays in increasing access to behavioral health services, particularly for those in underserved communities. The session included a series of panelists representing a variety of behavioral health experts and providers from public and private sectors including those representing academic institutions and health care organizations/systems.

Key Takeaway Points:
• There is a need to address workforce issues such as building provider capacity for providing tele-behavioral health and remaining flexible and adaptable from a provider perspective within the current environment.
• Connectivity impacts many patients resulting in unequal access to telehealth. As such, continued federal investment in broadband and technology is needed.
• Patient-centeredness is important as telehealth expands, with continued focus on keeping patients’ care and voices front and center.
• Advancing telehealth policy and reimbursement, including parity, is critical for tele-behavioral health services as well as the need for expanded licensure and practice across state lines.

Concurrent Breakout Sessions

Telehealth and Licensure Portability Access Beyond State Lines

This session focused on ongoing efforts to facilitate access to inter-state telehealth services. Speakers discussed the structure of state medical regulation, challenges with telehealth visits and state-by-state licensure, and efforts to address such challenges.

Key Takeaway Points:
• HRSA funds a Licensure Portability Grant Program, which provides support to the Federation of State Medical Boards and the Association of State and Provincial Psychology Boards.
• Several challenges exist with state-by-state licensure, including the time, costs, and the administrative burden to physicians.
• There is a need to address the lack of federal infrastructure to regulate the practice of medicine; however, such efforts would have to consider the consequences anticipated of unifying state medical practice acts that are enforced through state licensure and state medical boards.
• Efforts to support licensure portability and expanded access to telemedicine included legislatively enacted interstate compacts which are agreements between states in their sovereign capacity, which allow them to respond to national priorities and regional problems with one voice:
  o The FSMB have a license portability grant program that supports Interstate Medical Licensure Compact (IMLC), and a new effort in development is a physician assistant (PA) licensure compact with the Council of State Governments and other partners, including their professional association and their certification body.
  o The Association of State and Provincial Psychology Boards Psychology Interjurisdictional Compact (PSYPACT) is an interstate compact designed to facilitate the practice of telepsychology and the temporary in-person, face-to-face practice of psychology across state boundaries.

The Telehealth Experience: Improving Quality and Breaking Down Barriers

This session brought together experts from a medical school, health care system, medical association, and university to discuss ways to improve the overall quality of telehealth services and break down equity barriers. The presenters focused on how their work is aligned with the domains of telehealth quality and equity.

Key Takeaway Points:
• It is critical to re-examine existing measures that are applicable to assess the quality of virtual and in-person care.
• Eliminate the digital divide by increasing technology equipment access and improving digital literacy for vulnerable populations.
• Hennepin Healthcare has addressed telehealth quality by building a roadmap for their health care system that focuses on community engagement, appropriate language and translation, educational toolkits to support patients once they are scheduled, and provider professional development. Their virtual platform, Digital Equity Experts, offers a network of digital navigators who assist patients with digital access and digital literacy.
• The Center for Telehealth at the Medical University of South Carolina is implementing value-based strategies at sites across South Carolina. The strategies include, but it not limited to, increasing access to specialty care for hospitals, expanding convenient care, addressing health disparities, and avoiding unnecessary cost.
• The National Hispanic Medical Association is working to help others understand the
importance of regarding the heterogeneous, Hispanic population when considering telehealth access and quality.

**Ensuring Access to Telehealth Beyond the Pandemic**

This session included a two-part discussion: the first half dedicated to telehealth policy and the second half dedicated to addressing infrastructure issues beyond the COVID-19 public health emergency.

**Key Takeaway Points:**
- Overall, telehealth has been a silver lining of the COVID-19 public health emergency (PHE).
- There is a need for continued flexibility for reimbursement for virtual care through Medicare past the PHE.
- Data is critical to understand telehealth utilization now versus pre-pandemic as well as the practices and policies that should be put in place moving forward.
- Additional clarification is needed for states regarding policy changes at the federal level (e.g., HIPAA, audio-only telehealth, and provider-to-provider referrals for specialty care).
- There needs to be a focus on expanding parity laws for telehealth at the federal level and across states.
- It is important for local governments and communities to engage with state leadership and other stakeholders to keep attuned to new federal funding and investments.
- Broadband or internet access is a social determinant of health, affecting a myriad of other related factors impacting economic stability, access to education, social cohesion, among others.
- Prioritizing a national plan for broadband adoption as well as policy that supports mapping and understanding of national broadband capacity is critical.
- There is a need to align payment and policies to support expanded use of technology and high-speed internet (e.g., fixed wireless, fiber optic cable).

**Integrating Telehealth into Healthcare Practice**

Speakers in this session discussed key considerations for integrating telehealth in various medical settings, representing a range of health care perspectives that included a national association, university medical center, regional health system, and primary care provider. Speakers shared their insights on current models of health being implemented as well as some best practices for addressing barriers and challenges when implementing telehealth programs.

**Key Takeaway Points:**
- With the acceleration of telehealth during the pandemic, providers are looking to shift past just adoption to optimization of digital care.
- Quantifying the return on investment (ROI) and value of virtual care should extend
beyond solely financial ROI to include other measures such as patient access, patient satisfaction, and equity.

- Achieving buy-in requires an examination and framing of value to connect with various stakeholders (e.g., cost-savings, quality outcomes, provider satisfaction, revenue generation, referrals, retention in home community, and patient satisfaction).
- To increase telehealth use, it is important to address adoption of technology and providers’ initial concerns about being replaced or having care dictated to them.
- To achieve equitable care, we must keep patients’ needs and input central to future telehealth programs; provide care that is available when patients need it; and ensure care is coordinated, easy, affordable, and personalized.

Plenary – Improving Access to Telehealth and Broadband Services

This session convened representatives from federal agencies to highlight efforts and resources to improve access to broadband, a key component of expanding delivery of telehealth services and addressing other social determinants of health. Panelists discussed the coordination going on across agencies related to broadband expansion, providing flexibility to providers and patients for accessing telehealth (e.g., audio-only), and connecting low-income and underserved populations to resources.

Key Takeaway Points:

- HRSA’s Office for the Advancement of Telehealth discussed a new Telehealth Broadband Pilot Program, which assesses the broadband capacity available to rural health care providers and patient communities to improve their access to telehealth services.
- The Federal Communications Commission (FCC) discussed efforts to address the digital divide and expand availability of high-speed internet (e.g., Universal Service Fund, Rural Health Care Program, Connected Care Pilot Program).
- The National Telecommunications and Information Administration is supporting a number of programs funded by the Bipartisan Infrastructure Law signed in 2021, which invested roughly $65 billion in high-speed internet. These include investments to support equitable access, expand connectivity on tribal lands, and expand middle-mile infrastructure.
- The U.S. Department of Agriculture (USDA) shared an overview of resources and investments being made in telehealth available through the Community Facilities Program and Rural Utilities Service, Telecommunications Program.
Day 2 (May 17, 2022)

The second day of the conference opened with remarks from Heather Dimeris, Director of HRSA’s Office for the Advancement of Telehealth as well as a video with leaders and staff across HRSA discussing the importance of telehealth for underserved populations.

Concurrent Breakout Sessions

Preparing the Current and Future Healthcare Workforce for Telehealth

This session focused on current efforts to assist providers in using telehealth and considerations for training the workforce for the future.

Key Takeaway Points:

- There is a need for additional research and evidence on best practices in telementoring.
- It is important to consider the technology fatigue in telehealth and the continuum leading from fatigue to burnout.
- There is a need for investments and equitable access to digital workforce training and development, with a focus on populations and regions with greatest need, and continued investment in and support for training programs and models.

Tapping into the Telehealth Resource Centers

This session provided participants with an opportunity to learn more about the HRSA/OAT-supported Telehealth Resources Centers (TRCs) including their work and expertise in providing support and assistance to other programs and providers implementing telehealth services.

Key Takeaway Points:

- The South Central Telehealth Resource Center shared background on its remote patient monitoring (RPM) program that monitors high-risk pregnant women for high blood pressure using blood pressure cuffs with cellular connectivity monitored and connected to a clinical team.
- The Texas-Louisiana Telehealth Resource Center shared information about their school-based telehealth initiative which provides students in rural West Texas schools mental health screening, telehealth appointments, and follow-up care, through a multifaceted collaboration involving stakeholders from across the state.
- The Great Plains Telehealth Resource Center provided an overview of its new Medicare telehealth data tool which shows how telehealth has evolved over the last few years nationally, allowing interested parties to conduct an analysis of Medicare encounters broken down by provider type, services, and specialties.
Telehealth and COVID-19: Challenges and Solutions

This session focused on a discussion of telehealth and technology in addressing and treating COVID-19.

Key Takeaway Points:
- The Community Health Center, Inc. discussed how the evidence on eConsults shows numerous benefits including improved access and reduced wait times, lower medical costs, reduce emergency room use, and improved patient satisfaction; however, it is important to understand state requirements related to eConsults.
- The Center of Excellence at the University of Mississippi Medical Center’s Center for Telehealth described the implementation of a multi-disciplinary approach to treating Post-Acute SARS-CoV-2 Syndrome, or Long COVID, to address its symptoms and how telehealth can play a key role from screening to providing a multi-disciplinary recovery clinic. Provider specialties in the multidisciplinary recovery clinic include pulmonologists, pharmacists, physical and occupational therapists, and neurocognitive specialists (including psychiatrists).

The Evolving World of Telehealth Technology

This session was designed to provide an overview of the growing field of telehealth and telehealth technology including digital health and virtual care as well as key considerations for policymakers, payers, clinicians, patients, and researchers.

Key Takeaway Points:
- There is a need to more clearly communicate and inform health care and policy decisions through the clarification of telehealth terminology. Further, the value of understanding how different stakeholders use varying terms can help to make communication more effective.
- Physicians see the digital divide (i.e., gaps in understanding, access, and ability related to technology), as the greatest barrier to virtual care for patients.
- In order to take advantage of cutting-edge technologies (e.g., artificial intelligence, ubiquitous sensors), more research, training, and establishment of new workflows is needed.

Plenary - What’s Next for Telehealth: Looking Beyond the Pandemic

This session convened a panel of experts representing various national associations with an interest or focus on telehealth to discuss the key telehealth issues and priorities identified by their stakeholders and how those telehealth issues might evolve beyond the pandemic.
Key Takeaway Points:

- There is a need to improve the quality and standardization of data to fully demonstrate and understand the impact of telehealth and identify where disparities persist.
- It is important to leverage the workforce (e.g., community health workers) to serve as a link between providers and community with more care taking place outside of traditional settings.
- There is a need for policies to expand use of new technologies for all who need them (e.g., wearables, remote monitoring devices, etc.).
- Continued flexibility for the way individuals can connect with and engage in care (e.g., audio-only) is critical.
- Telehealth plays a key role in helping to address workforce issues by enhancing access and reducing burnout.
- It is critical to continue engaging with policymakers at all levels to educate and build support for telehealth’s continued use and expansion, including for policies tailored to the rural context.
